Q: I am reading ANSI/ASQ Z1.4-2008: Sampling procedures and tables for inspection by attributes, and there is a small section regarding inspection level (clause 9.2). Can I get further explanation of how one would justify that less discrimination is needed? For example, my lot size is 720 which means, under general inspection level II, the sample size would be 80 (code J).

By the way, that standard has formally been replaced by various commercial standards (ISO 2859-1, ANSI/ASQ Z1.4, and so forth). It is usually the buyer's responsibility to choose the inspection level- more samples to check means more chances to reject bad products when they are bad, but it also means more days (and dollars) spent in an inspection.
