Chapter 4 - 6 Flashcards | Quizlet

The risk of getting breast cancer increases with age. A woman is more than 100 times more likely to develop breast cancer in her 60s than in her 20s. If all women lived to age 95, about one in eight would be diagnosed with breast cancer at some point during their lives. However, the actual lifetime risk is lower than that, because 90% of women die before age 95, most commonly from heart ...

Risk factors for breast cancer - Wikipedia

Recall from Chapter 1 "Organic Chemistry Review / Hydrocarbons", Section 1.9 "Cycloalkanes", that cyclic alkanes containing five or six carbon atoms in the ring are the most stable. The same is true for monosaccharides that form cyclic structures: rings consisting of five or six carbon atoms are the most stable.
