## **Cloud Computing A Plain English**

Serverless computing is a cloud computing execution model in which the cloud provider allocates machine resources on demand, taking care of the servers on behalf of their customers. Serverless computing does not hold resources in volatile memory; computing is rather done in short bursts with the results persisted to storage.

## **Serverless computing - Wikipedia**

Plain english We replicate your current system on our servers. When we say, "We put your entire system in the cloud", what we mean is we'll replicate your system on our servers. We install all the programs you're currently using, copy across all your data, and give you access to it all via a login.
