Report - Making Viral Load Routine - Part I by MSF Access ...

Introduction: HIV viral load (VL) testing is recommended by the WHO as the preferred method for monitoring patients on antiretroviral therapy (ART). However, evidence that routine VL (RVL) monitoring improves clinical outcomes is lacking. Methods: We conducted a prospective, randomized controlled trial of RVL monitoring every six months versus a targeted VL (TVL) strategy (routine CD4 plus VL ...

Routine Versus Targeted Viral Load Strategy Among Patients ...

Frequency of routine viral load testing after 12 months on ART. Annual. Annual. Every 2 years. Sites. HIV prevalence. ART cohort eligible for VL testing Number of ART sites with access to VL testing.

manage exit plan with partners in 2018 so that m&e takes over. 2. make viral load monitoring routine 1. increase demand by pt education and hcw education 2. institute vl anniversary concept 3. implement gate keeping not to issue repeat scripts without vl 3. synergise data sources so that tier.net is optimally functional and totally reliable 1.

Making Viral Load Monitoring Routine within ART programmes

1. Introduction. Routine HIV viral load (RVL) testing is recommended by WHO as the preferred approach for patients on antiretroviral therapy (ART) in low- and middle-income countries (LMIC) 1. Compared to clinical or immunological monitoring, viral load (VL) monitoring has higher sensitivity and positive predictive value for the diagnosis of treatment failure 2, 3, 4, 5.

Routine versus Targeted Viral Load Strategy among Patients ...

Those with viral load ≥ 1000 copies/ml are referred for enrolment for EAC. EAC consists of three sessions done on a monthly basis. After three EAC sessions, each client is assessed for adherence and a repeat viral load test is done. If the viral load is suppressed (< 1000 copies/ml of blood), the client is continued on the same ART regimen.

Enhanced adherence counselling and viral load suppression ...

Making Viral Load Routine: Part 1 - Programmatic Report From 2013-2016 the UNITAID-funded MSF HIV viral load initiative has supported the programmatic and/or laboratory scale-up of viral load testing in seven countries (DRC, Lesotho, Malawi, Mozambique, Swaziland, Uganda and

Zimbabwe) performing almost 320,000 viral load tests.

Making Viral Load Routine: Part 1 - Programmatic Report ...

Having a high viral load - the number of particles of the virus they are first infected with - gives the bug a 'jump start'. It also raises the risk of a patient's immune system becoming ...

Coronavirus: Amount of particles, or 'viral load' affect ...

1 Introduction. Viral load (VL) testing is the gold standard approach for monitoring treatment effectiveness in HIV-positive patients on anti-retroviral therapy (ART) 1.VL suppression can be a performance indicator for ART programmes 2.Regular VL-monitoring allows identification of suboptimal adherence, treatment failure and identification of patients whose ART regimen should be switched ...
