Poly Dispersity Index (PDI) Macromolecules are the "giant" molecules (polymers) formed when small organic molecules (monomers) are joined in a biological medium. Example: protein. Due to joining of many monomer units, the molecule has high molecular weight and high viscosity. Macromolecules have a molar mass distribution due to the simplest homopolymers made of homologue chains with a different number of repeating units.

1. Power Distance Index (PDI) Power distance describes the degree to which members of society expect and accept an uneven distribution of authority, resources, and privileges. The threads of this dimension of culture run through social insitutions and organizations such as schools, political bodies, the family, and the workplace.
