power supply is given by % regulation = max min 100 max VV V - x where Vmax = maximum dc output voltage and Vmin = mini-mum dc output voltage. When we say that 10 V regulated dc power supply has a regulation of 0.005 per cent, it means that dc output voltage will vary within an envelope 0.005 per cent of 10 V. Now, 0.005% of 10 V = max mni 100 max VV V - x

Line regulation is a static performance measure of how well a power supply holds the output voltage Constant in the face of a changing input. Line regulation defines the change in output voltage or current resulting from a change in the input Voltage over a specified range. % Line Regulation = VOUT(Max)-VOUT(Min) / VOUT(Normal) x 100

### REPORT ON POWER SUPPLY - WordPress.com

Pastafarian deity The first time anyone sees a series regulated tube power supply, they start to question what they know about tubes. If it's an especially tricky regulator with pentodes and stuff, they might question their ideas of audio altogether. And if there's a zener voltage reference, watch out. The poor tube head will probably forsake...

### Tube Regulated Supplies - wauwatosa tube factory

Regulated is a general term used to define any type of power supply which has a stable output voltage or current independent of input or load. It may be a linear power supply, adjustable power supply or a variable power supply.

### Learning Regulated Power Supply And Its Design [Easy ...

Regulated power supply is an electronic circuit that is designed to provide a constant dc voltage of predetermined value across load terminals irrespective of ac mains fluctuations or load variations.

### Regulated Power Supply-Block Diagram,Circuit Diagram,Working

A regulated power supply is used to ensure that the output remains constant even if the input changes. A regulated DC power supply is also known as a linear power supply, it is an embedded circuit and consists of various blocks. The regulated power supply will accept an AC input and give a constant DC output.

### Regulated Power Supply: What are they? (Plus Circuit Diagram)

This Homemade Power supply is useful for the Electronics hobbyists and service persons to test and troubleshoot the circuits. It gives six stage well regulated output power with a current of 800 mA.Its construction is "Open type" as it is home made. You can make it like a professional power supply by fixing inside a box with connectors for tapping the output.
